EV-as-a-Service

EV-as-a-Service (EVaaS) eliminates the heavy financial and operational burdens of traditional fleet ownership—such as upfront capital investment, maintenance, insurance, and compliance—by offering a flexible subscription model. With EVaaS, companies can scale fleets easily, access the latest technology, and avoid asset depreciation, enabling smoother operations and lower financial risk.

FROM CORNER STORES TO CITY CORES.

EV.PRO is the modern fleet management company dedicated to electrifying fleets, installing chargers, optimizing energy, managing maintenance, and guaranteeing reliability for local communities.

Step 1: Get Started Immediately

Our team of experts will learn about your business and provide an honest assessment as to which vehicles will (and will not benefit from a migration to EVs.

Get a **FREE** proposal within 48 hours.

Step 2: Charger Installation

We will handle your charger installation through our partner network of trusted electrical contractors with minimal interruptions to your business.

We are your personal project manager.

Step 3: Vehicle Delivery

We will deliver your vehicle right to your doorstep, up-fitted to your needs. We will coordinate with everyone and take care of all the paperwork.

We are your personal admin manager.

Step 4: Guaranteed Reliability

Included in our fixed monthly fee, we cover all your vehicle and charger maintenance, both planned and unexpected. And if needed, we've got you covered with rental vehicles to ensure your business operates without interruptions.

We are your personal fleet managers.

Step 5: End of Term

If you'd like to keep your EVs we're happy to extend your term and lower your monthly payment. Looking to upgrade? We'll take our used EVs and provide you with new ones.

We are your fleet electrification partner.

BUSINESS PROFILE

Intuit Dome is a new indoor arena in Inglewood that opened in August 2024. Home of the LA Clippers and other live events, the Intuit Dome worked with various mobility partners to create a Mobility hub for patrons.

EV.PRO is responsible for providing Intuit Dome's fleet of full electric Micro Transit shuttles.

PRIOR TO EV.PRO

Organizers for the Intuit Dome wanted to provide the most state-of-the-art arena while maintaining a carbon neutral footprint. Traditional models didn't suite their needs because purchasing/financing didn't allow them to refresh their fleet every few years and leasing/rentals didn't allow for branding. Furthermore, they were looking for EV experts to manage the planning, provisioning and growth of their service.

WITH EV.PRO

Intuit Dome partnered with EV.PRO to launch their Micro Transit Shuttles with an initial fleet of 10 Ford E-Transits. We provided the **lowest priced offer they received, supported local dealers and suppliers, and managed all upfitting to delivery – we had their new fleet fully operational within 65 days.**

EV.PRO'S IMPACT

92 Hours Saved Per New Vehicle Procurement & Charger Install

- Vehicle sourcing & procurement
- Vehicle upfitting and modification
- Long-distance vehicle delivery
- Titling & registration
- Rebate identification & monetization
- Charging site design & specification
- Charger procurement
- Charger installation management
- Charging session optimization
- Emissions reporting

\$450 Monthly Lease Savings Per Vehicle

- Upfitting 10 Ford E-transits to 10-seater passenger vans comes at a significant cost that EV.PRO received a significant discount because of the volume of business we have provided to the dealer & upfitter.
- Since we are constantly monitoring and maintaining our EVs, we've consistently provided better financing than other players, lowering the monthly payments for the Intuit Dome.

1,483 lbs of CO2 Emissions Saved Per Month Per Vehicle

- Each Ford E-transit generates zero tailpipe emissions.
- Based on the average mileage of each Micro Transit Shuttle at 1,666 miles per month at 404 grams of CO2 per mile for an equivalent ICE Ford Transit, this equates to 1,483 lbs of CO2 avoided through electrification.

Quotes

"It's been incredible working with a partner so aligned with our brand, sharing the same commitment to sustainability. Together with Intuit, we're driving impactful change—setting a new standard for what's possible at the intersection of technology, transportation, and environmental responsibility."
– Sarah, Intuit.

EV.PRO

CASE STUDY : WashClub NYC

BUSINESS PROFILE

WashClub NYC is New York City's first laundry facility to operate on 100% solar energy, embodying a commitment to a greener, cleaner future.

The company operates a fleet of vans as part of their mobile dry cleaning and laundry service.

PRIOR TO EV.PRO

WashClub were constantly dealing with **downtime of their ICE vans** due to both scheduled and unscheduled maintenance and repairs, costing them an average of **\$650 per day in lost revenue** when those vehicles were out of service. Coordinating repairs was time-consuming, pulling attention away from operations and creating inefficiencies.

WITH EV.PRO

EV.PRO has deployed 1 Ford E-transit initially for Washclub with another 3 on the way. With less than 20 moving parts in the EV drive train vs 2,000+ in an ICE van – we have significantly minimized the need for maintenance/repairs. Furthermore, with EV.PRO's **95% uptime SLA**, a rental van will be provided to them if disruptions last longer than expected – minimizing lost revenue.

EV.PRO'S IMPACT

\$20,000 Off MSRP

- EV.PRO secured a 2023 Ford E-Transit at \$20k below MSRP, offering significant savings compared to market rates.
- Even after shipping the vehicles across the country, EV.PRO's price remained the best available, providing exceptional value to WashClub.

Avoided \$650+/Day in Lost Revenue per Vehicle

- Each day a van is down, WashClub forfeits \$650+ in potential earnings.
- Renting replacements, repairs, and operational disruptions compound the financial impact, increasing overall losses.
- Delivery delays and service disruptions risk damaging customer satisfaction and long-term relationships.

1,336 lbs of CO2 Emissions Saved Per Month Per Vehicle

- Their new Ford E-transit generates zero tailpipe emissions.
- By replacing one Nissan NV200 averaging 1,500 miles/month and 12 MPG WashClub NYC is saving 1,336 lbs of CO2 emissions per month per vehicle.

Quotes

"We lose a ton of revenue, piss off customers, and it takes a stupid amount of time to coordinate each and every repair. I didn't start this business to fix fleets every month. I wish EV.PRO was around years ago."
– Rick Rome, Founder.

"You gotta look clean when you're in the cleaning business. These EVs are slick and I'm excited for them to be rolling billboards around town."
– Rick Rome, Founder.
