

SAN BRUNO-MILLBRAE EL CAMINO REAL MULTIMODAL IMPROVEMENT CORRIDOR STUDY FACT SHEET

STUDY OVERVIEW

El Camino Real is a well-used corridor that goes through much of San Mateo County. It is critical for those going north-south between San Jose and San Francisco and has many important connections to retail centers. Every year, people are killed or seriously injured on El Camino Real due to speeding, running red lights, and other factors that put other motorists, bicyclists and pedestrians at risk.

The City/County Association of Governments of San Mateo County (C/CAG) is conducting the San Bruno-Millbrae El Camino Real Multimodal Improvement Corridor Study (Study) to determine how accessibility, safety, and connectivity may be improved for people walking, biking, driving and using transit.

STUDY GOAL

The goal of the Study is to develop and prioritize short-term, quick-build projects supported by data and public input that improve safety and connectivity using the existing transportation infrastructure. After the Study is complete, the cities of San Bruno and Millbrae can implement them to support long-term improvements on the corridor.

PROJECT TIMELINE

- Phase 1 (Fall 2025): Learn about the project and share your current experience and transportation needs along the corridor.
- Phase 2 (Spring 2026): First viewing and opportunity to comment on draft concepts/alternatives based off traffic and parking analysis. Your comments will inform staff on the selection of a preferred concept/alternative.
- Phase 3A (Summer 2026): Review the preferred alternative and share your input.
- Phase 3B (Winter 2026): Learn about the final proposal option and next steps based on data analysis and your feedback.

GET INVOLVED

The Study will use community input to help define current transportation safety challenges, as well as define and prioritize projects to address them.
